1 Table S1 Dew frequency, total net water vapor flux, mean values of water vapor mixing ratio (w), canopy temperature (T_c) and relative humidity
 2 (RH, relative to T_c), total precipitation (P), mean isotope ratios of dew, precipitation, atmospheric water vapor, xylem water, leaf water and soil
 3 water at 0 - 5cm depth in winter wheat and summer maize in Luancheng and in a grassland in Duolun. All isotopic measurements except
 4 precipitation were made during dew events. The leaf delta in Luancheng is the average of the values of upper and lower canopy leaves.

Species	Dew				w (mmol mol ⁻¹)	T_c (°C)	RH (fraction)	Precipitation			Vapor		Xylem		Bulk leaf		Soil	
	Frequency* (% of nights)	Amount (mm)	δD (‰)	$\delta^{18}O$ (‰)				P (mm)	δD (‰)	$\delta^{18}O$ (‰)								
Winter Wheat	65 (68)	10.1	-13.4	-1.2	14.3	12.4	1.03	170	-45.9	-7.1	-99.5	-12.6	-38.3	-4.2	-13.1	1.4	-49.1	-6.2

1 Table S3 Linear relationships between the measured δD and $\delta^{18}O$ of precipitation, dew, atmospheric water vapor, leaf water, xylem water and
 2 soil water at 0 - 5cm depth for winter wheat and summer maize in Luancheng and grassland in Duolun during dew events. 95% confidence
 3 intervals on the regression parameters were shown. The measured deuterium excesses ($\delta D - 8\delta^{18}O$) are also shown.

	Winter wheat and Summer maize					Grassland

3

1 Figure S4. Same as in Figure 1 but for the relationships between δD and $\delta^{18}\text{O}$. For
2 comparison, also shown is the standard GMWL. Regression statistics are given in
3 Table S3.
